

URJA CHAKRA

The Eternal Cycle of Energy

*Urja Chakra is India's vision of the clean energy leadership - not as a destination,
but as an enduring cycle of transformation that benefits people, economies and the planet.*

Energy can neither be created nor destroyed; it can only be transformed. The sun becomes light, light becomes life, wind becomes movement, and water becomes power. Across nature, energy flows in an endless cycle of transformation.

This eternal cycle inspires **Urja Chakra** - derived from the Sanskrit words Urja (energy) and Chakra (cycle). It represents the continuous flow of energy: generated, stored, transmitted, consumed and renewed, creating a self-sustaining ecosystem.

The Chakra also reflects a timeless idea at the heart of India's civilisational philosophy: movement, balance, renewal and interconnectedness. Renewable energy embodies this principle - drawing from nature without depleting it and enabling progress without compromising the future.

As the guiding design philosophy of the **Bharat Renewable Energy Summit & Expo 2026**, **Urja Chakra** represents the convergence of science, sustainability and civilisation. It reflects a future where clean energy flows continuously, innovation drives progress, and collaboration keeps the cycle of transformation in motion.

ऊर्जा स्वराज । जन कल्याण । विश्व कल्याण ।

A Vision for a Clean Energy Future

Every great transformation begins with a simple idea.

Our vision is rooted in a timeless progression: **Urja Swaraj. Jan Kalyan. Vishwa Kalyan.** It is a philosophy that sees energy not merely as a resource, but as the foundation of human progress, national resilience and global wellbeing.

It begins with Urja Swaraj - energy sovereignty.

The ability of nations, communities and individuals to secure clean, affordable and reliable energy while building the capabilities to produce, manage and benefit from it. Renewable energy is not only about generating electricity; it is about creating resilience, strengthening local capacity, fostering innovation and giving people greater control over their own futures.

From Urja Swaraj emerges Jan Kalyan - the empowerment of people.

When clean energy powers a school, a health centre or a small enterprise, it creates opportunity. When a farmer irrigates fields with a solar pump, when a household generates electricity from its rooftop, or when an entrepreneur builds the next generation of clean energy technologies, energy becomes more than infrastructure. It becomes agency. It expands livelihoods, strengthens communities and enables people to shape their own development.

And when empowered people and resilient nations come together, they create Vishwa Kalyan - the wellbeing of the world.

Global wellbeing is not built through technology alone. It is built when prosperity is shared, development is sustainable and innovation is accessible. It is realised when countries collaborate, share knowledge and create solutions that leave no one behind. In this vision, national progress becomes a catalyst for global progress.

This is the pathway that India seeks to advance.

Our clean energy journey has never been solely about replacing one source of energy with another. It is about transforming the relationship between energy and society - from dependence to self-reliance, from passive consumption to active participation, and from national capability to global responsibility.

It is a vision where energy creates opportunity, opportunity empowers people, empowered people strengthen communities, and stronger communities contribute to a more resilient and sustainable world.

This is the philosophy that underpins the **Bharat Renewable Energy Summit & Expo 2026**. It reflects India's conviction that the energy transition must ultimately be a human transition- one that delivers not only cleaner power, but greater dignity, prosperity and resilience.

*From Urja Swaraj to Jan Kalyan. From Jan Kalyan to Vishwa Kalyan.
From energy sovereignty to human empowerment. From human empowerment to global wellbeing.*
